Component 1 Principles of Training
Principles of training: F I R S T O P

| Principle | Explanation | Application |
| :---: | :--- | :--- |
| F.I.T.T | F = Frequency (how often) <br> I = Intensity (how hard) <br> T = Time (how long) <br> T = Type of training | I train 3 times per week <br> 3 sets of 8 reps of 15kg <br> I train for 60 minutes <br> I use circuit training |
| Individual | Everybody is different and <br> has different needs. It is <br> important to match training to <br> the requirements of the <br> individual | Ronaldo is a professional <br> footballer he trains 5 <br> days per week. John <br> plays Sunday league <br> football and trains once <br> per week |
| Reversibility | Just as football improves with <br> training, it can decline if you <br> stop training | Reversibility can be <br> caused by lack of training <br> or injury |
| Specificity | raining must match the <br> requirements of the activity <br> so that the right muscles and <br> body systems are adapted | A sprinter should train <br> for speed <br> A rower should train <br> using a rowing machine <br> not a treadmill |
| Thresholds | To improve fitness, you should <br> train within your target zone. <br> Your target zone will depend <br> on the intensity of the <br> activity <br> Aerobic = 60 - 80\% max HR <br> Anaerobic = 80-90\% max HR | Running a 10k is an <br> aerobic activity. You <br> should therefore train in <br> the aerobic training zone <br> of 60 - 80\% of the max <br> heart rate |
| Overtraining | Too much training can lead to <br> injury and prevent <br> improvement. Rest, duration <br> of a session and the intensity <br> are all important when training | Training everyday does <br> not allow enough time for <br> rest for recovery and <br> adaptations |
| Overload | Progressive overload is <br> gradually increasing the <br> amount of training so that <br> fitness gains occur, but <br> without the risk pf injury | Week 1 = run for 10 mins <br> Week 2 run for 15 mins |
| Oressive |  |  |

## Thresholds of training

Aerobic training zone $=60-80 \%$ of $\max \mathrm{HR}$
Anaerobic training zone $=80-90 \%$ of

## The Karvonen formula

Maximum Heart rate $=220-$ Age

## Worked example

John is 16 years old
His maximum heart rate $=204 \mathrm{bpm}$ Aerobic training zone $=60-80 \%$ $60 \%=60 \times 204 \div 100=122 \mathrm{bpm}$ $80 \%=80 \times 204 \div 100=163 \mathrm{bpm}$

Component 1 Methods of Training

## Methods of Training

| Continuous Training | Fartlek <br> Training | Circuit <br> Training | Interval <br> Training | Plyometric Training | Weight <br> Training |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Is aerobic <br> Has no breaks or rest (20 min or more) | Form of continuous training <br> Varies in pace and terrain | Contains stations organised in a circuit they can be skill or fitness based, | High intense exercise followed by periods of rest to recover Usually anaerobic | High Intensity <br> Short duration <br> Breaks between sets (exercises) | Form of interval training <br> Involves reps and sets |

Weight provides the resistance Improves strength, power and muscular endurance

## muscular endurance

cardiovascular \&

murance | muscular endurance |
| :--- | :--- |

Advantages $\quad$ Advantages $\quad$ Advantages

| cardiovascular \& muscular endurance | cardiovascular \& muscular endurance | cuits, time or ions | can improve strength and cardiovascular | Improves power (speed \& strength) |
| :---: | :---: | :---: | :---: | :---: |
| Advantages | Advantages | Advantages | Advantages | Advantages |
| No equipment or facilities <br> Has many health benefits (CHD) | No equipment or facilities Change of pace can be more interesting | Variety of stations generates interest Can be skill or fitness Can easily be adapted | Can be used to improve health and fitness (aerobic \& anaerobic) No equipment needed | Develops power quickly <br> No equipment |

Advantages
Can target specific areas of the body Easily adapted for different fitness' Disadvantages
Boring
No change of pace
Can cause impact
injuries

| No change of pace Can cause impact injuries | High intens be avoided <br> A safe route may be hard to find | Equipment can be costly Can be time consuming to set up | Can be repetitive and boring <br> Need to plan and keep track of sets | Can cause injury due to high intensity | with poor technique <br> A spotter needed <br> with free weights |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Sports | Sports | Sports | Sports | Sports | Sports |
| Marathon running cycling swimming | Fotball Rugby Netball | Can be adapted to suit all sports | Usually for speed It can be adapted to other sports | Basketball Long jump Hurdles | Weight lifting rugby shot-put |
|  |  |  |  |  |  |

- Involves continuous activity between 30-60 minutes, includes step and aqua aerobics
- Improves Cardiovascular fitness

- Moderate to high intensity, lots of reps \& uses barbells
- Improves strength \& muscular endurance
- Exercises done on a mat, uses resistance and focuses on core strength
- Improves flexibility, balance \& strength

- Exercise done on a mat
- including relaxation \& breathing techniques
- Improves flexibility balance \& strength

Spinning

- Continuous cycling to music
- Improves muscular endurance \& cardiovascular fitness
